

Minutes of the ISOLDE Physics Group Meeting, 9th of Jan 2019

Technical news

- Nothing to report from the technical side as everything was shut down

Safety

- During 2019, the GLM area will be reconstructed to become a class C lab. Exact timing is not yet fully clear, but it should not cause major inconvenience for the other experiments.
- Letizia has asked that each experiment makes a short overview of the plans for modifications of beam lines etc. during LS2. Deadline for this will be at the end of January.

AOB

- In order to train the local PhD students to give seminars, the PhD students will be asked to give 1 seminar each year about their work during LS2. After each seminar, 2-3 people will be asked to give constructive feedback (Ronald will coordinate this). It would be interesting if this initiative would not be limited to the physics group. PhD students from other groups, TISD/MEDICIS/RILIS, ... are warmly welcome to join these presentations and also give their own. Ronald will send a mail around to organise this practically, starting end of January/early February. Volunteers for a specific date can already send a mail to Ronald, with suggested title.
- Karl will send a mail around to ask for progress reports for the coming INTC meetings. There won't be a meeting in Feb.

Seminar

There was no seminar.
