

## Minutes of the ISOLDE Physics Group Meeting, 24<sup>th</sup> of April 2019

### Technical news

- **General**
  - REX amplifier upgrades: User-friendly operation upgrade
  - Front-end removal: Found several indications of rust in the front-end demolition. These types of material should not be used in the new assembly!
  - Air conditioning in b508 is finally working in all laboratories.
- **MEDICIS**
  - MEDICIS-MELISA: Didn't observe any sign of Tb beams. Most likely it was impossible to heat the target material to sufficient temp.

### AOB

- Works will take place in the asbestos-room next to the ISOLDE visitor's room. If you do not want the sound of works disturb your meeting, please schedule it somewhere else. Most probably, the PGM will also move to b508u until the works have finished
- ISOLDE website will be upgraded to DRUPAL 8. If you have any nice pictures from the last years, please forward them to Jenny. (Our photo stream is out of date)

### Seminar

- The PGM was followed by a seminar of Frederik with the title: "Collinear resonance ionization spectroscopy towards  $^{100}\text{Sn}$ ".
